RESEARCH INTERESTS

- **Multimodal:** Vision-Language, Audio-Video, Audio-Image, Interleaved modalities
  My goal is to uncover multimodal interactions within data to develop models that effectively understand various modalities, leading to enhanced human-machine interaction and increased AI accessibility in human life.
- **Efficiency:** Data pruning, Token selection, Model compression
  To further enhance the AI accessibility, I aim to minimize training or inference costs of models by developing algorithms that identify data or model structure redundancies.
- **Continual learning:**
  I am also interested in developing algorithms that keep models up-to-date with evolving multimodal knowledge.
- **Curriculum learning:**
  One of my interests is discovering the relationship between task-solving skills in Large Vision-Language Models to optimize instruction tuning data order, improving training efficiency (empirical study PDF).
