#### RESEARCH INTERESTS

My goal is to promote AI democratization by developing resource-efficient multimodal models that make AI more accessible and interactive for anyone. Lowering resource barriers and enhancing language and multimodal understanding will broaden AI use for individuals and empower diverse groups to participate in AI development.

- Multimodal: Vision-Language, Audio-Visual, Interleaved modalities
- Efficiency in data & algorithms: Data selection, Continual learning, Curriculum learning (empirical study)
- Efficiency in architectures: Mixture of Experts (MoE), Token reduction, Model Compression
- Efficiency in systems: Retrieval-Augmented Generation (RAG), Information retrieval
- Interpretability: Interpretable LLM and MLLM, Attribution methods

AI Researcher Aug. 2024 - current

• Currently working on a layer-wise LLM compression approach to reduce deployment costs.

MLAI Lab-KAIST Seoul, South Korea

Master's Degree Student Researcher (Advisor: Sung Ju Hwang)

Mar. 2023 - Aug. 2024

- [P1] Suggested an information retrieval framework that uses a VLM to integrate interleaved multimodal content within a document into a unified document representation, improving retrieval abilities.
- [C3] Proposed a visual instruction tuning data selection method that uses a small model to group data into concept-skill clusters and selects data from each cluster, reducing time costs by 70%.
- [C2] Developed an audio-visual patch selection method that addresses dynamic multimodal semantics in continual pre-training, continuously adapting to new knowledge while reducing GPU memory consumption by 45%.
